Outreach Assessment Report

Xpress Minds | Data Intern Assessment | Report date: 7 November 2026

Summary. The cleaned workbook holds 104 school records after 3 duplicates were removed. Of these, 75 have been contacted (72.1%). From those 75 contacts, 26 schools are marked interested and 26 are marked registered, so each stands at 34.7% of contacted. 30 follow-up dates have already passed as of 7 November 2026. The numbers below come straight from the Outreach_Data sheet and match the Power BI dashboard.

104 Total records	**75** Contacted	**72.1%** Contact rate (contacted / total)	**85.3%** Response rate* (64 of 75 contacted)
26 Interested	**34.7%** Interested rate (26 / 75)	**26** Registered	**34.7%** Registration conversion (26 / 75)

*Response rate counts contacted records whose Response_Status is anything other than "No response". Provisional, see limitations on page 2.

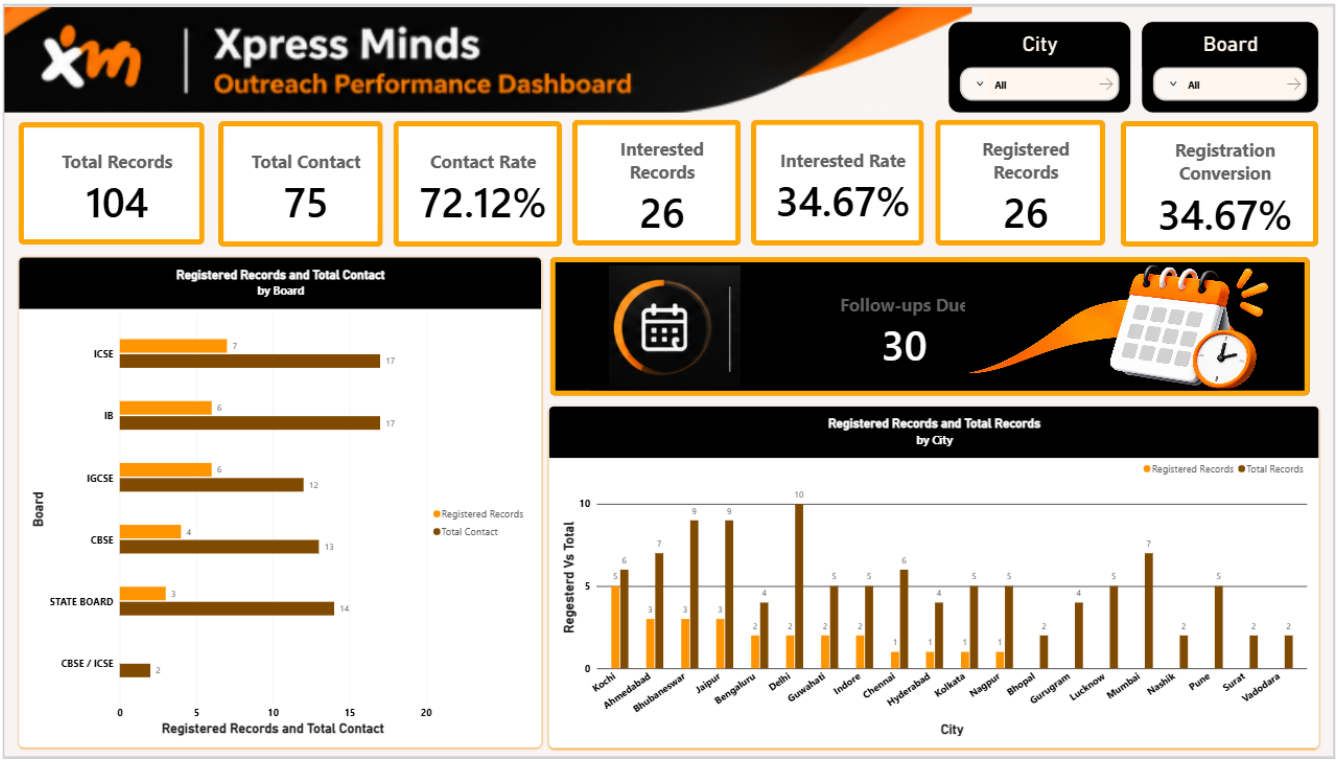

Figure 1. Outreach Performance Dashboard (Power BI), all cities and boards selected.

Performance by board

Board	Records	Contacted	Contact rate	Interested	Registered	Registered / contacted
IB	20	17	85%	7	6	35%
ICSE	24	17	71%	3	7	41%
State Board	20	14	70%	7	3	21%
CBSE	19	13	68%	4	4	31%
IGCSE	18	12	67%	4	6	50%
CBSE / ICSE	3	2	67%	1	0	0%
Total	**104**	**75**	**72%**	**26**	**26**	**35%**

- **IB** has the best reach (85% contacted) and the highest interest among the large boards (7 of 17).
- **State Board** has the most interest per contact (7 of 14) but the lowest registration (3 of 14, 21%). Interest is not turning into sign-ups here.
- **City level:** Kochi has 5 registrations from 6 records, followed by Ahmedabad, Jaipur and Bhubaneswar with 3 each. Lucknow (5 contacted) and Mumbai (5 contacted) have no registrations yet, and neither do Gurugram, Bhopal, Nashik, Pune, Surat or Vadodara.

1. Data cleaning and duplicates

Cleaning was done on School_Data and Outreach_Data together, linked by Record_ID, and every change is written in Cleaning_Log and Duplicate_Log. Original values were kept in the log rather than overwritten silently.

What was found	What was done	Records
Exact duplicate rows (XM-108, XM-117, XM-171)	Removed from both sheets. Matched on name, city, contact, email and phone against XM-008, XM-017 and XM-071	3
Same school name in different cities (e.g. Indus International School)	Kept. Treated as separate branches, not duplicates	Review list of 20
Board spelled "State Borad"; city "Bombay"	Changed to STATE BOARD and Mumbai	20 and 1
Uppercase names and emails; phones without +91	Proper case for names, lowercase emails, +91 added	3 + 3 + 6
Missing email, website, last contact, next follow-up	Left blank and flagged. Nothing was guessed	9, 5, 47, 71
Status and flag conflicts (e.g. Registered_Flag = 1 but status is not Registered)	Kept as is and flagged for source check, because the correct value is unknown	16 + 24

2. Research and verification

14 entries are logged in Research_Log: 8 email checks and 6 website checks, with source URL, date and confidence recorded for each. Confidence as logged: 7 High, 5 Medium, 2 Low. Because the school list is made-up practice data, a real school with a similar name is only a lead. The two Quest Public School entries are rated Low for this reason (one source is an engineering academy, the other an NGO in another city), and Northstar High School matched a school in Rajkot, not Surat. Two emails came from YouTube and Instagram pages, so they should be re-checked on a school website before anyone uses them. None of the found values has been copied into the cleaned sheets as confirmed.

3. Recommended actions

1. Clear the follow-up backlog, live ones first. 30 follow-up dates are on or before 7 November, and 26 of them are more than a week old (the oldest is 7 October). 17 are still live (not registered and not marked Not interested), and 7 of those carry an Interested response. Call these 7 this week.

2. Fix the State Board drop-off. Half of the contacted State Board schools show interest but only 3 of 14 registered. Send a short details pack and book a second call within 7 days of the first reply. Compare the result with IGCSE, where 6 of 12 contacted schools registered.

3. Contact the 29 uncontacted schools in cities that already convert. Bhubaneswar (4), Delhi (3) and Ahmedabad (3) have the most uncontacted schools and already show registrations. In parallel, review the pitch used in Lucknow and Mumbai, where 10 schools were contacted and none registered.

4. Weekly database maintenance

Day	Task
Monday	Import new and updated records into a staging sheet. Keep the original file untouched.
Tuesday	Clean and validate: trim spaces, fix case, check +91 phone and email format, match board and city to the approved list, check duplicate Record_IDs and repeated name + city.
Wednesday	Reconcile Outreach_Status, Response_Status and the three flags. Correct at source and write every change in Cleaning_Log.
Thursday	Research missing website, email or phone for a fixed batch of about 10 records using official school pages. Log URL, date and confidence.
Friday	Refresh the Power BI dashboard, list follow-ups due next week, and send the summary to the team.

Assumptions and limitations

- Record_ID links the two sheets. Contacted, interested and registered counts come from the 0/1 flag columns, and interested and registration rates use contacted records (75) as the base, as the brief asks.
- "Follow-ups due" means a Next_Follow_Up date on or before 7 November 2026: 30 of the 33 dates filled in.
- Response rate (64 of 75) is provisional. 24 records flagged as not contacted still carry a response status, so the status column is not fully reliable.
- 16 records have Registered_Flag = 1 without a Registered status (Kochi shows 5 registrations against 4 contacted). These were flagged, not changed, so registration figures could move after a source check.
- The data is synthetic and no institution was contacted. Research results are unverified leads and nothing was inferred or filled in.
